DWA_04.3 Knowledge Check_DWA4

---

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

- Naming conventions - the use of descriptive names will make it easier for people to know what that variable will be used for. The camelCase and pascalCase rules make code better for reading.

- Semicolons - for me this rule also makes it better to read code and just to know where the line breaks or where part of your code ends.

- Whitespace - by indenting your code, your code would look structured and will also be easier to read through your code. Your code would just look better visually.

---

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

- Strings - because sometimes when your string gets long you want to break it into different lines. For me one line string or more then one line, it will still have the same outcome.

- Array - sometimes you want to use different rules to get to what you want to do.

- Iterators and generators - I just think if you want to generate something you should generate it the best and easy way you know how.
